TITLE of the INVENTION

"Method and device for partitioning a computer program"

TEXT of the ABSTRACT

The invention concerns a method of partitioning a computer program situated on a first processing site, the program containing subprograms able to transfer information, characterised in that it includes a step (E310, E320, E327) of automatic determination, for at least one of said subprograms, of data representing the transfer of at least part of the information processed by said subprogram, and a step (E350) of allocating said subprogram to a second processing site according to said data.
